Training Fire Request

Live-fire training on structures inside urban growth areas, in counties that plan under the requirements of RCW 36.70A.040, REQUIRE A PERMIT and require that the following conditions be met prior to training (RCW 52.12.150 and RCW 70.94.650). Training fires outside urban growth areas must also meet the following conditions:

RCW 70.94.650(7) allows the limited burning of prohibited materials to provide for fire fighting instruction training. Therefore, all prohibited materials not deemed essential to the training activity shall be removed such as furniture, carpeting, and other prohibited materials.

CONDITIONS:

1. The fire conforms to any other permits, licenses, or approvals that are required.
2. The fire is not located in an area that is declared to be in an air pollution episode or any stage of an impaired air quality as defined in RCW 70.94.715 and RCW 70.94.473;
3. Nuisance laws are applicable to the fire, including nuisances related to the unreasonable interference with the enjoyment of life and property and the depositing of particulate matter or ash on other property;
4. Notice of the fire is provided to the owners of property adjoining the property on which the fire will occur, to other persons who potentially will be impacted by the fire, and to additional persons in a broader manner as specifically requested by the local air pollution control agency or the Department of Ecology;
5. Each structure that is proposed to be set on fire must be identified specifically as a structure to be set on fire. Each other structure on the same parcel of property that is not proposed to be set on fire must be identified as such;
6. Before setting a structure on fire, an inspection shall be conducted to determine if materials containing asbestos are present. All persons who inspect for asbestos-containing building materials (ACBM) in schools or public and commercial buildings must have AHERA certification (40 CFR 763). A competent person must survey residential structures for ACBM. The inspection must be documented in writing and forwarded to the Olympic Region Clean Air Agency (ORCAA), and asbestos that is found must be removed as required by local, state and federal laws.
7. All mercury-containing thermostats and switches have been identified, properly removed, and safely disposed of prior to setting a structure on fire.
8. A copy of the permit shall be available on site during the burn.
